DIAGNOSIS

Name of Patient: TSUKUMOTO Koji

Date of Birth: Dec. 23, 1882

Address: No. 2, 546 Kichijoji, Musashinocho, Kitatama-gu,
Tokyo

Progress of Illness:

On waking up in the morning of Jan. 21, 1944, the patient felt his right hand and right leg slightly paralysed. He had a little trouble in the use of his right hand and also felt slightly difficult to walk. He has not only been unable to get rid of his aforementioned troubles until today but his condition seems to have grown worse. He feels his leg frozen even in summer time. He has a slight difficulty in speaking and his memory seems to have failed somewhat. At one time he had concurrently developed a dropsy in the lower thigh and suffered from disorder of digestive organs.

Diagnosis:

A slight case of cerebral haemorrhage.

Treatment:

The patient was ordered to rest, staying indoors, and was given medicine at times. It is still necessary for him to rest hereafter.

Date of Diagnosis: April 16, 1947

Doctor: MATSUMOTO, Noboru (seal)

Address: No. 150 2-chome, Higashidai-cho,
Suginami Ward, Tokyo.
